

## Exercise 5 Bonus

**What you will learn:** Create different widgets in a brand new screen

1. Create a brand new screen, using File->New->Screen. Choose “No” for the wizard. Save the screen as *field\_test* in Workshop.lib.
2. Create several different types of widgets onto his screen like:
  - Multiline Text
  - Radio Button
  - Check Box
  - List Box
3. Save the screen and access the screen from the browser using [http://localhost:8080/workshop.exe/field\\_test](http://localhost:8080/workshop.exe/field_test)

What you learnt in Exercise 5: What do some of the Panther fields look when deployed in the browser.
